

Plug wire bending testing machine

RGT-1302

Equipment description:

Test the folding strength of the plug-chip and the wires. Testing method is the tested materials placed on the fixture. and add a certain load, the fixture swing from side to side in the test, after a certain number of times to see their break rates; or it can not power on, and then automatic counting the number of times, it will automatically stop operating when the material is going to break. so this machine can operate 24 hours without staff guard.

Corresponding standard:

GB2099、UL、VDE、IEC、JIS standard requirement

RGT-1302

Applicable Industry:

Used for wire and cable, don't need person to guard

Technical parameter:

Model	
Fixture	6 set
Swing angle	45°、60°、90°、180°、 adjustable
Swiing speed	10~60C.P.M, adjustable
Load weight	50/100g/200g/300g/500g each 5sets
machine weight	About 130 kg
Power supply	220V
