

RGT-1308

Product Description

Wire and cable elongation tester

CE

Equipment summary

Wire and cable elongation tester is suitable for aluminum, copper, iron and other metal materials to measure elongation. The tester is testing elongation of metal materials; Using advanced software program and sophisticated electronic sensing technology to measure the elongation of tensile specimen, Automatically converted into % and the value of LED display. According to the conductive wire, coupled with advanced control technology to enable this device automatically calculates the high-precision percentage, fully automatic features and simple operate, easy to read, accurate value.

Main features:

According to the conductive wire, coupled with advanced control technology to enable this device automatically calculates the percentage of high-precision, fully automatic features. Is a wire-like material of choice for elongation testing equipment.

Technical parameters:

Diameter range: 0.08 ~ 0.8mm
drawing speed: 250 ~ 300mm/minu
Starting Length: 250mmu
extended range: 0 ~ 48%
Display Accuracy: 0.1%

Input Power: AC220V 50/60HZu
Size: 50 × 21 × 24 (cm)
Weight: 13kg
