

RGT-1608

Enameled wire paint scraper reciprocating tester

CE

Product description:

The instrument is a kind of silk bags, flat wire and round wire enameled coating for mechanical abrasion test apparatus for testing the performance of its scratch coating. The scratch performance. Instruments are electromechanical integration products with a beautiful structure, which is sensitive, stable, reliable, clear display, easy operation and convenience.

To meet the standards:

Consistent with GB / T 4074.15-1983 enameled wire paint scraper test test test method standard reciprocating.

Applicable industry;

It is the ideal test instrument of the magnet wire manufacture, research, product quality supervision, inspection industry and sectors.

Technical parameter:

RGT-1608

Model	
Test range	Flat line of 0.8~5.6mm(narrow)Round line:0.1~5mm
Calculation	0~999
Sensitivity	>0.1mA, <2mA
Test voltage	DC9V±0.5V
Reciprocting frequency	60±1 times/min
Reciprocating stroke	11±1mm
Powr consumption	<80W
Work environment	0~40 Centigrade,Relative humidity:<80%
Power and voltage	AC220V±10%,50HZ
Outside size	L×B×H 608×320×320mm
Weight	25kg
