

# RGT-1511

## Product Description

### Crib side percussion testing machine

#### Product description:

During use crib side testing machine simulation crib percussion, its resistance to repeated impact performance. The main framework for machine uses about 50 \* 40mm aluminum production, the floor using 10mm thick steel plate, the surface paint wrinkle treatment, beautiful and generous. Durable. All pneumatic components, electrical components, all imported components.

#### Corresponding Standard:

During use crib side testing machine according with GB ,EN standard

#### Applicable Industry:

During use crib side testing machine, it is ideal testing instrument for pram manufacturers, research and product quality supervision and inspection industries and sectors.

#### Technical Parameters:

	Crib side percussion testing machine
Impact angle	60 degree or 90 degree

## RGT-1511

Impact mode	The impact of the free swing
Impact speed	5 time/min—20 time/min adjustable
Impact times	0-9999 times (Times can be set ),When happen abnormal situation it automatically stops shocking and counting
Impact pendulum weight	2KG
Radius of turn	300MM
Volume	1200*800*1800mm(excluding the control box)
Weight	170KG
Notes	Testing machine should be able to impact on 850MM anywhere of wide bed
